*Reasons for Allowance*

1. The following is an examiner's statement of reasons for allowance: Claims 12-20 are considered allowable over the prior art of record insofar as none of the prior art suggests the method being claimed. The method requires formation of a container system using an injection unit body and an expandable balloon. The container system is formed with a body recess for receiving a first container and including a pair of opposing bottom corners which are at least as thick as the body wall thickness. None of the prior art suggests forming a container having the required thicknesses using a method as claimed. The patent to Farrell teaches only the general formation of a parison using an injection system including an expanded balloon. It does not suggest forming a recessed container where the thickness at opposing bottom corners of the recess are at least as great as the body wall thickness. It is believed that formation of a recessed container using the technique of Farrell would necessarily result in a thinning at the outer edges of the recess area due to localized stretching of the parison. Neither Farrell nor any of the prior art of record suggests how to make the recess without thinning the material using the particular molding method claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
